# **1. Introduction**

In our day to day life, sometimes we are very much engaged in various stuffs. That's why we tend to forget the things to do at particular time like wishing our friends/relatives on their birthdays/anniversaries, attend meeting, our routine schedule etc. So reminders are very helpful to prevent these things. By using reminders we can schedule our activities. Reminders help us to look towards opportunity amongst uncertainty. Reminders give us hope and strength to persevere. And so this application is developed for the reminder giving purpose. It will help us to schedule our activities and help to our emotions as well.

## **2. Developer's View of application**

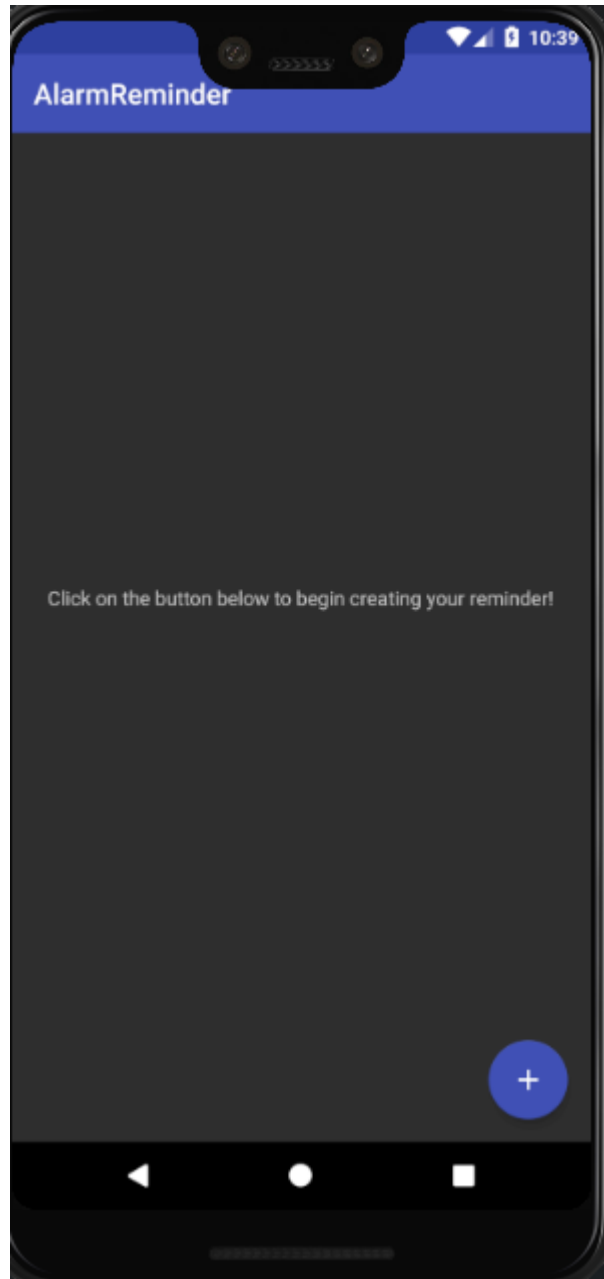

This application is designed for the purpose of reminding a user about various events in his/her busy life. This application helps to send a text message to anyone by setting reminder once. Our app is attached with emotion as well, like setting up reminder for wishes to a user's friend/relative or well wishers. By using this application, user can also set self-reminder coming in a form of text message to self, like business meetings, routine activities etc.

### **3.    Functionalities**

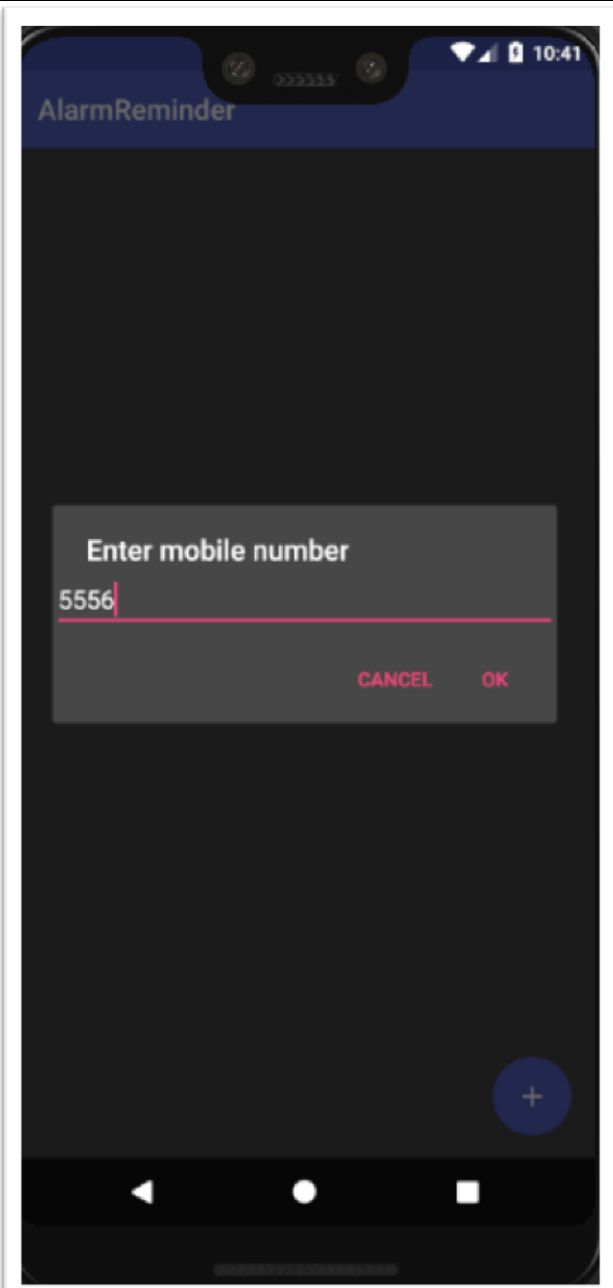

- Set self-reminder
- Set message to send to a receiver at a particular time
- Set Date and Time for the Reminders
- Set Notification sound
- Set Reminder repetition Interval
- Set Reminder repetition Type
- View History
- Delete or Mute the Reminder
- Access Android Message application

## 4. How to Use

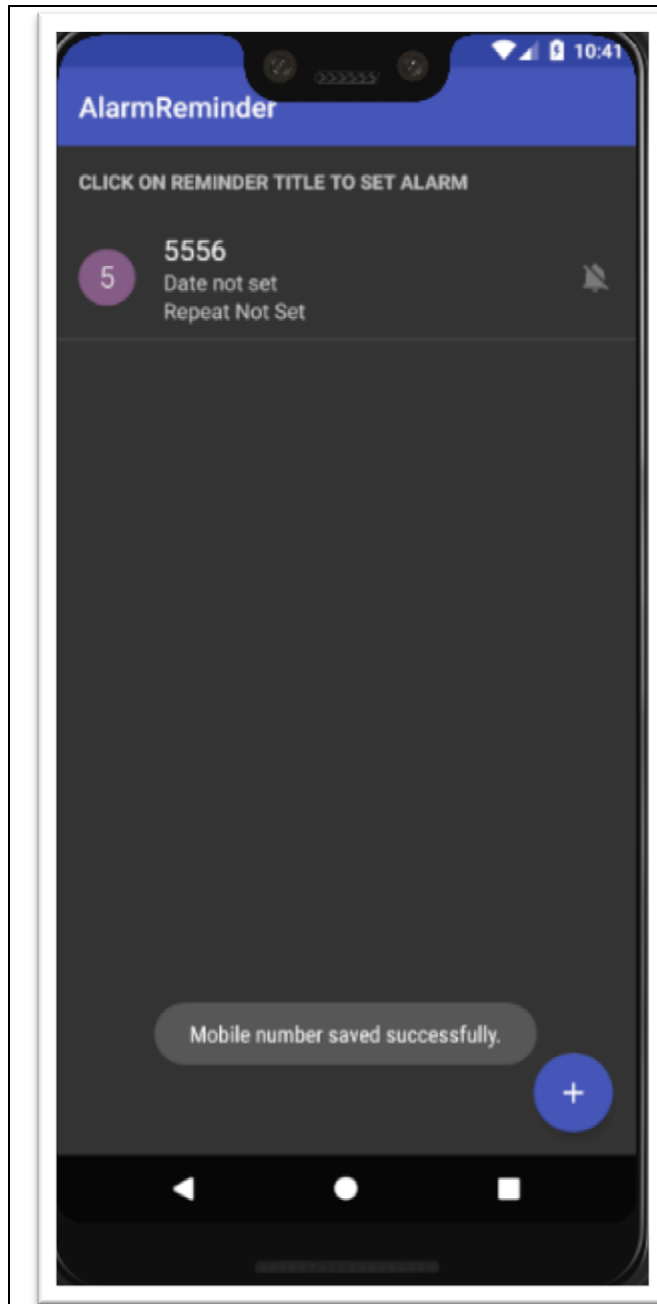

First of all a user has to install the application and then open it. Then the given window will appear for first time.

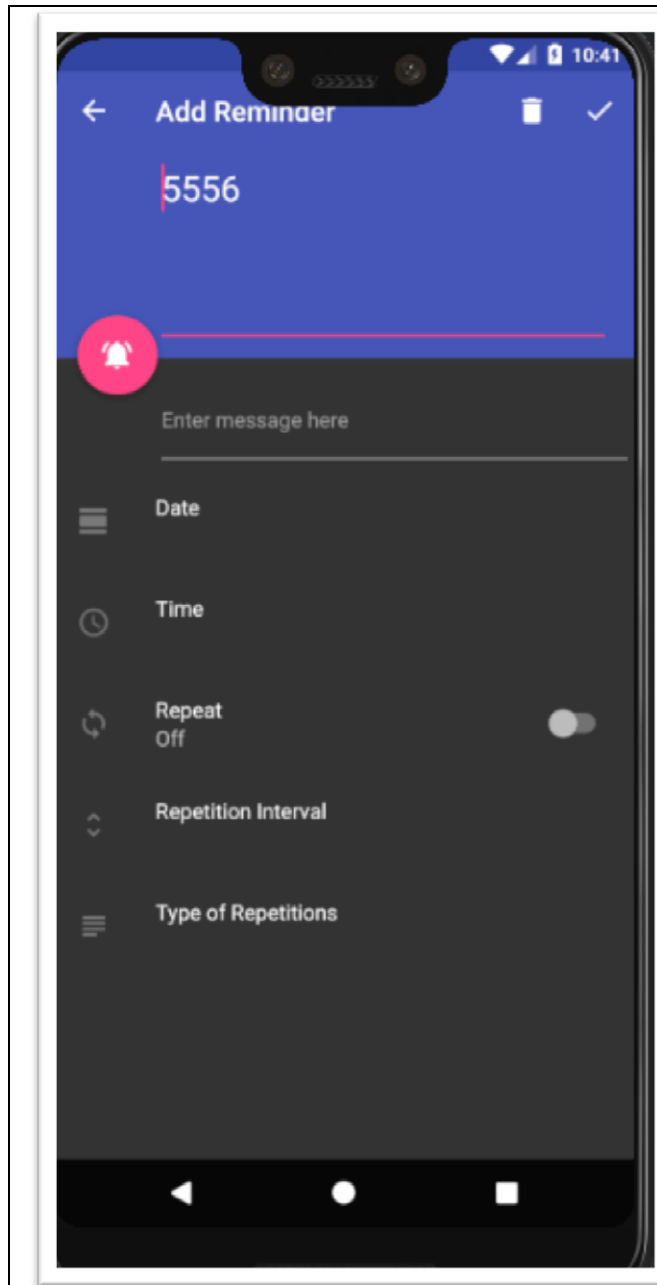

Then activities that are to be performed are explained in given table below.

<i><b>Activity</b></i>	<i><b>Description</b></i>
 A screenshot of a mobile application titled "AlarmReminder". The app has a dark blue header bar. The main screen is black. A grey dialog box is centered on the screen with the text "Enter mobile number" and a text input field containing "5556". Below the input field are two buttons: "CANCEL" and "OK". At the bottom right of the screen, there is a blue circular button with a white plus sign. The Android navigation bar is visible at the very bottom.	<ul style="list-style-type: none"><li>● After opening the application user has to enter the mobile number of receiver to whom the message has to be sent.</li><li>● If a user wants to set self-reminder then he/she has to enter mobile number of self.</li><li>● After entering mobile number, if user wants to continue then he/she has to press ok otherwise cancel.</li></ul>

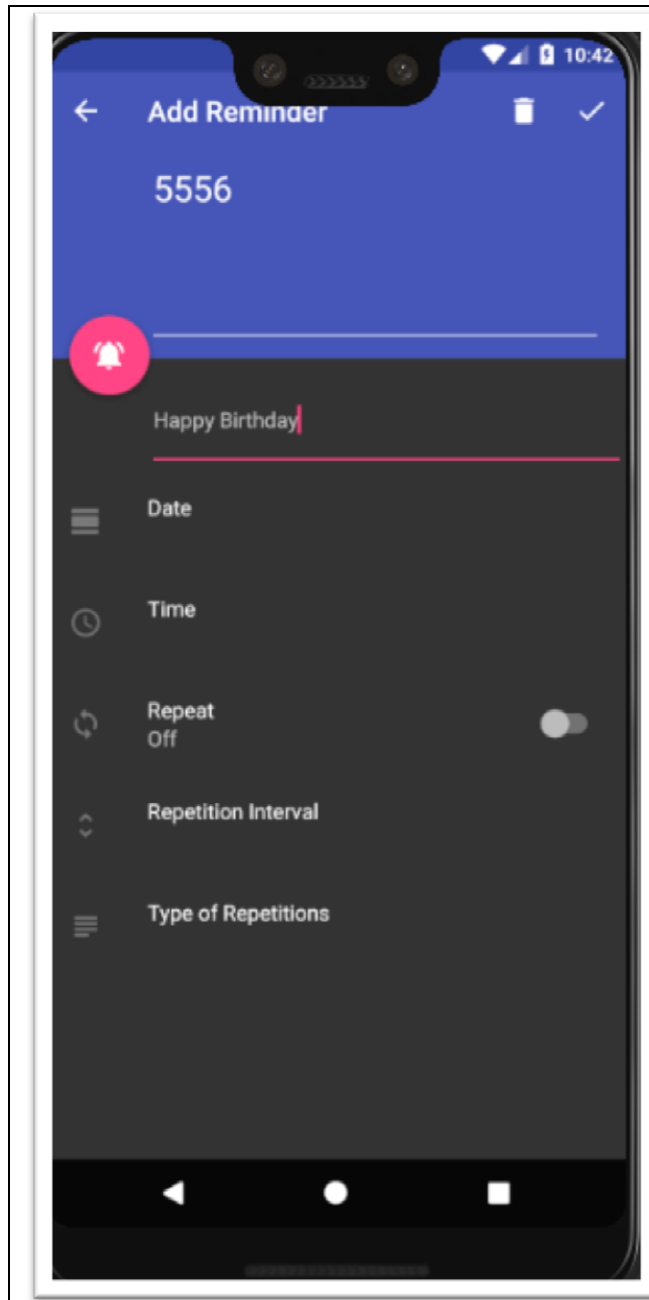

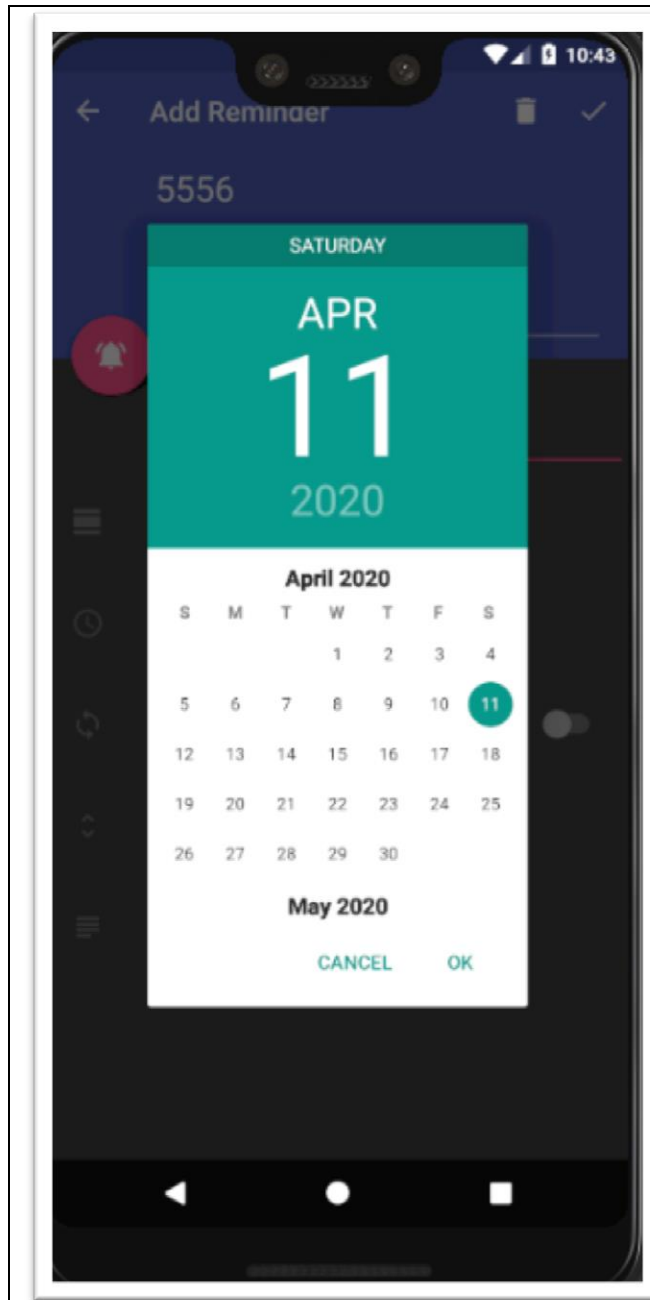

- After pressing ok, the reminder will be saved to the reminder list but yet not set.
- User can view the list of reminders in this particular window.
- And also can add more reminders in this window itself by clicking floating action button.

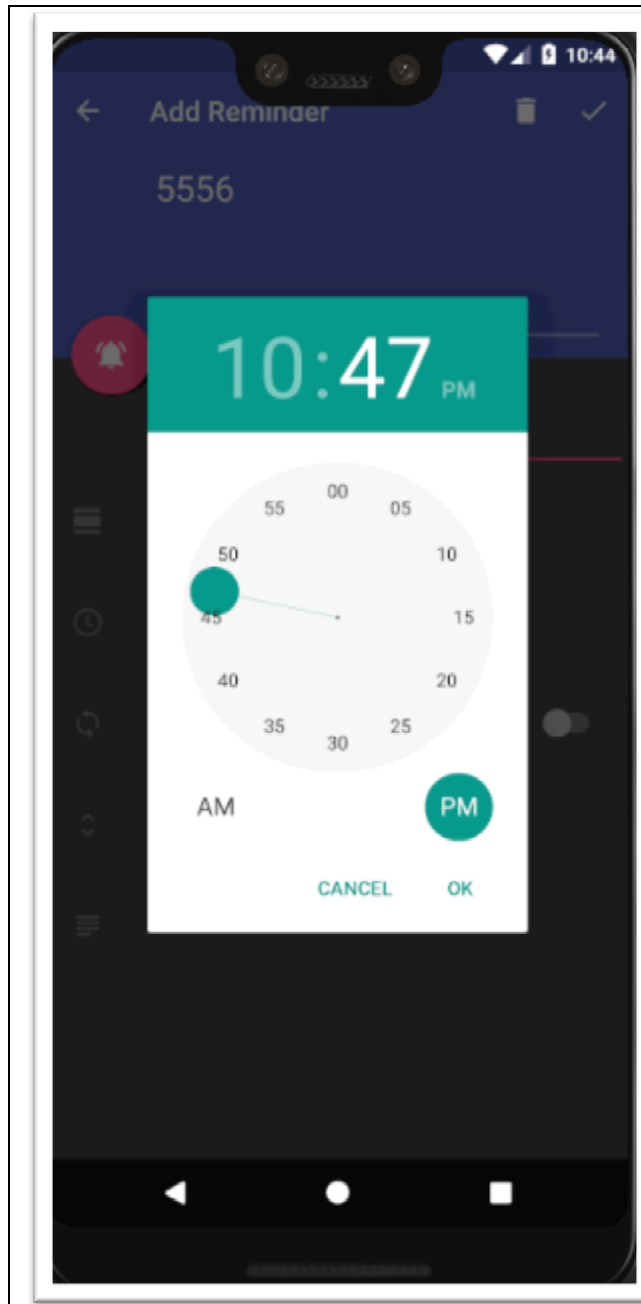

- For setting a reminder, user has to click the particular saved or registered mobile number from the reminder list.
- After clicking that particular reminder title, given window will appear.
- In this window user can set all the details for the reminder.

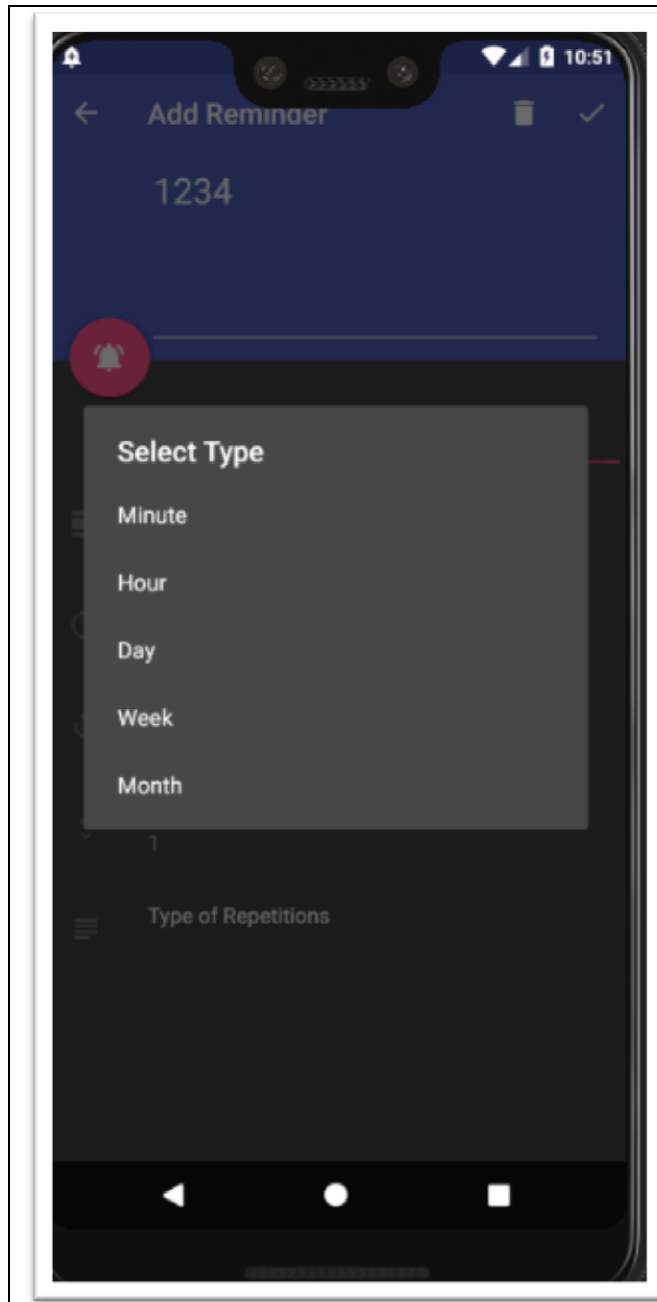

- The notification sound will be set to ON by default but user can configure it.
- User has to write the message in the given textbox.
- It can be modified later on.

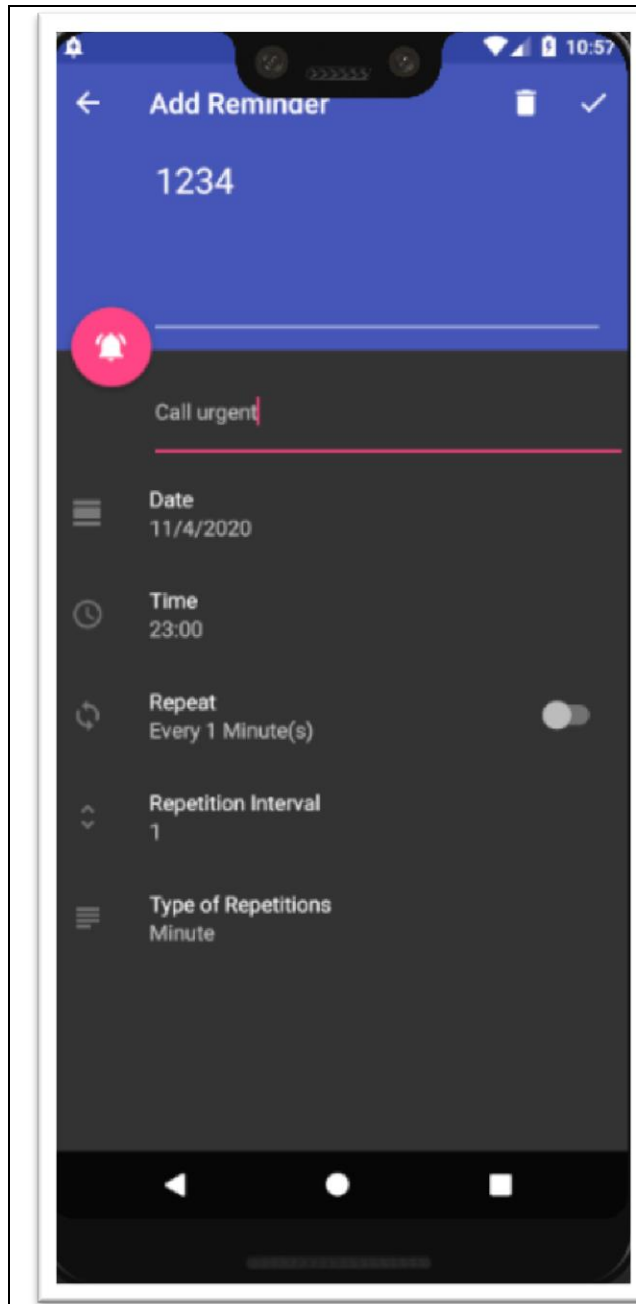

- For setting the date user has to click the date toggle and set date by the calendar.
- Also it can be modified.
- Date cannot be set before current date.

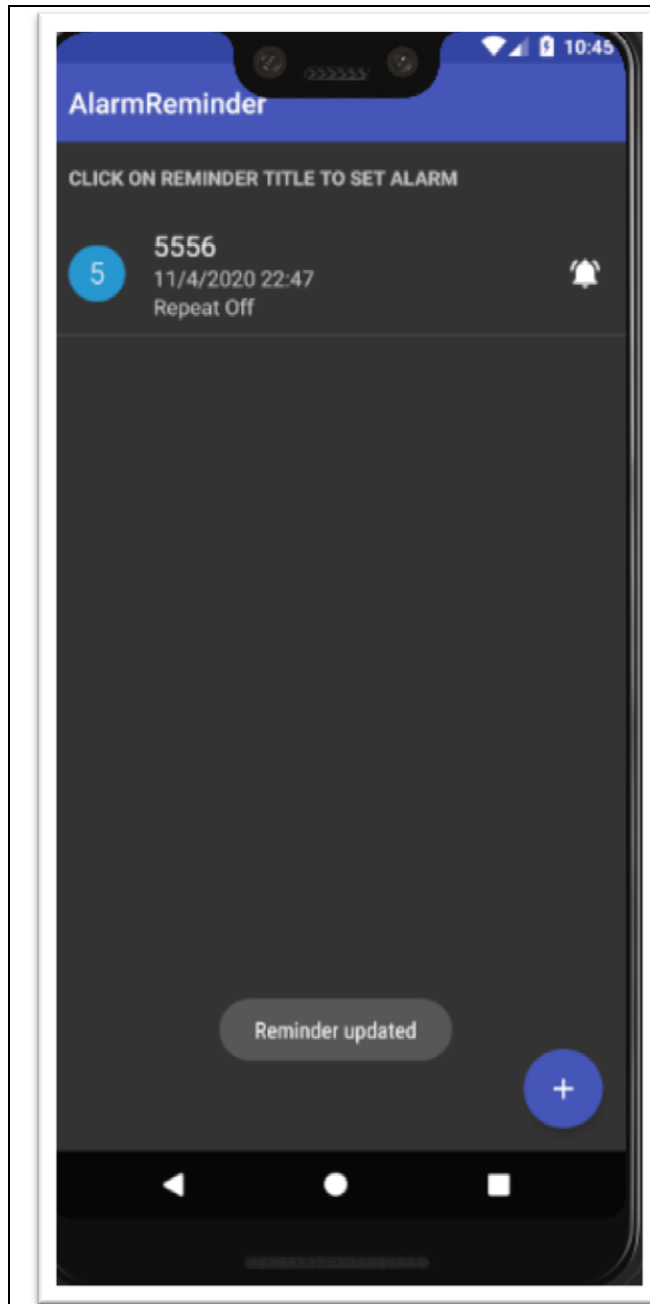

- By clicking the time button user can set time up to minute interval.
- Time also can be modified.
- Time cannot be set before current time.

- User can set the reminder repetition by toggle on.
- User has to set the reminder repetition type like repeat after minute, repeat after hour etc.

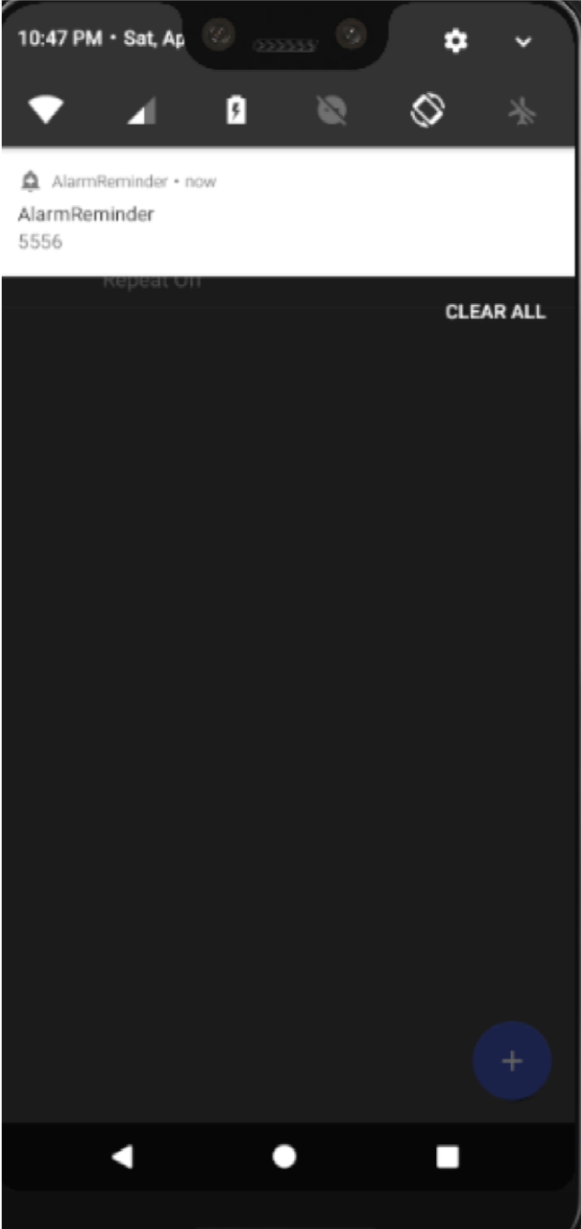

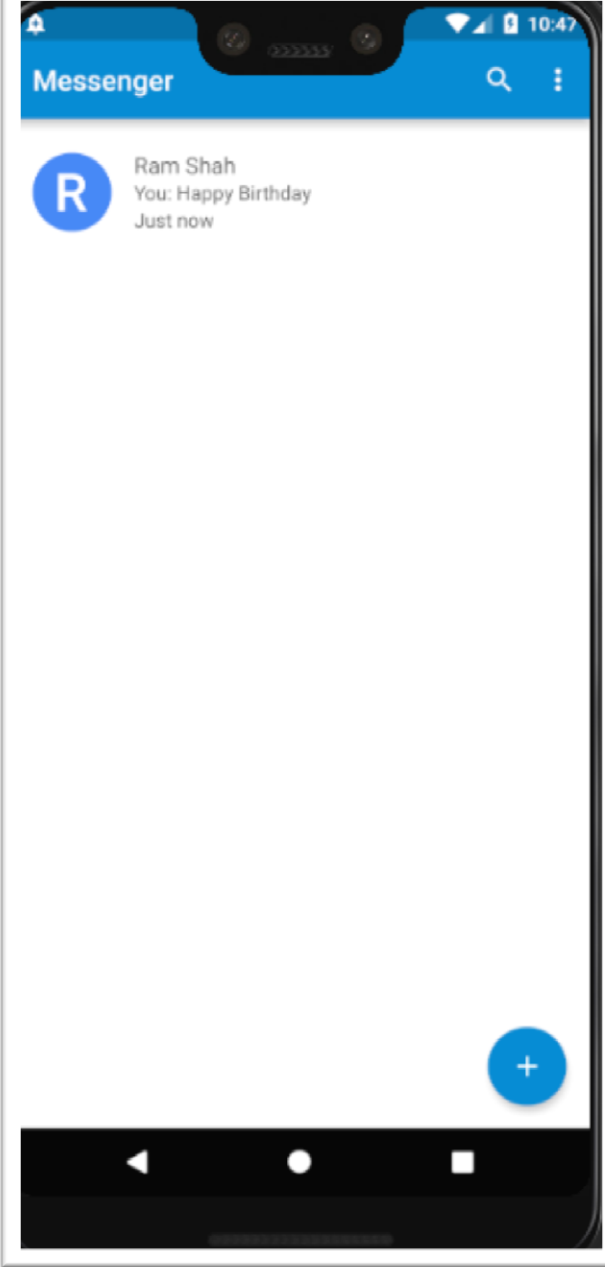

- User can set the number of time repetition of reminders.
- User can delete the reminder by clicking delete button.

- After setting the entire details user has to click save (the tick-mark).
- Then the in given window Reminder will be set as you can see.

	<ul style="list-style-type: none"><li>● When the time set in a particular reminder occurs, then message will be sent to registered mobile number and user will be notified.</li></ul>
--	---

	<ul style="list-style-type: none"><li>● User can crossed check by viewing the messenger application.</li></ul>
--	--

## 5. Help-Line

In case of any confusion or error occurrence regarding the application user can ask any queries by dropping an e-mail on any of the given email ID.
